Call and examine goods, you will not regret. —E. E. J.

to reach the school room, would a teacher be permitted to remain in it.

the dim vista of the long past, the shadowy memories that come as we pass beyond the hills, to the setting sun, there comes to life the picture of another youth, a brown-haired freckle-faced boy of some summers. This is his first winter school, and those rough boots made

ture of moisture in the wood dust, mass should be slightly but thoroughly damp. If five pounds of salt be added the amount of acid may be slightly increased. The mass must be thoroughly worked with the alkali and again heaped. After at least a better twelve, hours the heap is spread and sprinkled with a solution of chloride of lime water and soda, again thoroughly mixed. Two pounds of carbonate of soda are used for

an established fact that consumption is cured, but it is far better to prevent the disease from fastening itself on the body by the timely use of a remedy like King's Balsam of Wild Cherry, which is especially suited to cough or cold. Consumption yields to its power."

comfortable, they maintain well records of their thoughtful master in eggs. The hens have averaged 60 eggs per year. He feeds on warm mush in the morning, grain at night, with a liberal allowance of bone meal oyster shell. We have in his flock the Wyandottes, Old English Game, Game Pheasants, Blue Rocks, Bantams, and White Rocks, but he considers the Brown Game the superior for laying purposes. He has two incubators of different styles and accommodates 565 large eggs and 1,000 small eggs.

and gives us as a reason that he has time to read it. We have trouble to inquire into the habits of these terribly busy men, that they too often spend their drinking hog wash and loafing billiard rooms, while their Sun-occupied in reading dime novels. It is that such people are always of the ballot, when they forget of how to use it as an advantage.—*Labor Advocate*, Lewis-
